**Summer 2022 Internship (Work Study) – Zuker Lab, Columbia University**

We have an exciting opportunity for enthusiastic and motivated Work Study students to come join our laboratory starting this summer.

**What We Do**

The taste system is one of our fundamental senses, responsible for detecting and responding to sweet, bitter, umami, salty, and sour stimuli. Our laboratory studies the logic of taste coding as a platform to understand how our brain creates an internal representation of the outside world and transforms sensory signals at the periphery into percepts, actions and complex behaviors. To find out more about our research, please visit zukerlab.com.

**What We Can Do For You**

- 1:1 Mentorship with a Postdoctoral Fellow or Graduate Student.
- Experience working in a research environment and training in essential laboratory skills, including how to analyze results and present your research.
- Opportunity to work with a team of senior undergraduates that will bring you on board and help you navigate working in a laboratory.
- As a lab specializing in taste, we also have the best snacks!

This position has the opportunity to continue into the 2022-2023 academic year, and/or transition into a project for BIOL 3500. No experience is required, just a passion for science and learning new things.

**Contact** If interested, we want to meet you - please email lr2653@columbia.edu and introduce yourself!
